

# Second Hands®

Introducing the simplest and fastest tool for connecting and disconnecting large diameter hose (LDH) and connecting multiple hard suction hoses. No more need for a second person, no more fumbling with spanner wrenches, and no more wasting crucial time when establishing a water supply.

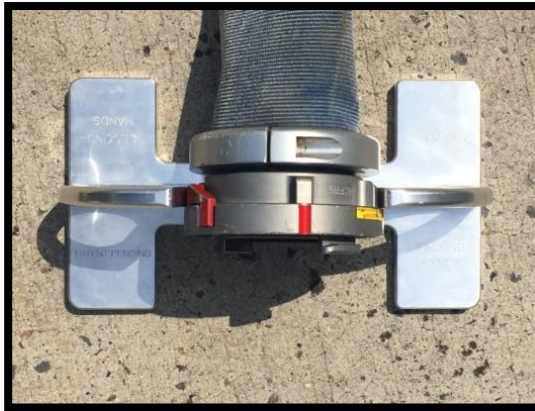

Intuitively designed for ease of use, this solid aluminum, maintenance-free tool weighs only five pounds and enables a **single firefighter** to quickly and easily complete urgent and critical water supply evolutions involving **LDH or Hard Suction Hose**

For **LDH**, simply hold one coupling and place the opposing coupling in **Second Hands®**. The tool securely **locks the opposing coupling in a stationary position** and **activates the release lever** enabling the firefighter to **keep both hands on one coupling**, maximizing grip and leverage, to easily connect or disconnect the hose coupling.

For **Hard Suction Hose**, place the male coupling or hose of one hard sleeve onto the **Second Hands®**. This **will hold it steady and off the ground** so that the opposing female coupling can be **easily threaded** on it.
